The Mobile Applications: Android course provides you with the knowledge and skills necessary to develop Android mobile applications for the commercial market. You will learn to build robust, commercial-grade Android applications, and will gain an understanding of how to extend application functionality. The course will also cover the steps to finalize applications for external release. The course is self-paced, self-directed, and online.

At the end of this course, you will be able to:

- Describe the history and types of Android applications
- Explain the elements to build basic Android applications
- Identify user interface layouts and events
- Describe the use of threads and persistence to extend Android applications beyond a single functionality
- Explain the process of finalizing Android applications for external use

This 41 hour time-on-task non-credit course is appropriate whether you are an IT student or professional who would like to build robust, commercial-grade Android applications.

**Flexibility**

- Class times that fit your schedule
- Fully online and completely self-paced
- Lesson assessments to gauge comprehension and retention

**Quality**

- Award-winning instructional design
- Intuitive, understandable material

**Career Mobility**

- Skills in demand in your area, now
- Better job opportunities or workplace advancement
